FRAN Quarterly

QUARTER 4 • OCTOBER–DECEMBER 2013

Frontex official publications fall into four main categories: risk analysis, training, operations and research, each marked with a distinct graphic identifier. Risk analysis publications bear a triangular symbol formed by an arrow drawing a triangle, with a dot at the centre. Metaphorically, the arrow represents the cyclical nature of risk analysis processes and its orientation towards an appropriate operational response. The triangle is a symbol of ideal proportions and knowledge, reflecting the pursuit of factual exactness, truth and exhaustive analysis. The dot at the centre represents the intelligence factor and the focal point where information from diverse sources converges to be processed, systematised and shared as analytical products. Thus, Frontex risk analysis is meant to be at the centre and to form a reliable basis for its operational activities.

USA	United States of America

Executive summary

The fourth quarter of 2013 was characterised by the highest number of detections of illegal border-crossing of all fourth quarters since 2009. Specifically, the number of detections in the Central Mediterranean was more than four times higher than in Q4 2012. However, as in most previous years, detections on this route decreased between Q3 and Q4 due to the onset of the winter season rendering sea crossing more difficult.

In a tragic accident on 3 October 2013, more than 360 migrants died when a wooden boat capsized near Lampedusa. The tragedy took place when migrants lit a fire to draw the attention of nearby vessels after the satellite telephone provided by the facilitation network had failed to work. The fire got out of control and panic erupted onboard. A search-and-rescue operation initiated by an emergency call of a nearby fishing boat mobilised all maritime on-duty assets in the region. Emergency services managed to rescue 158 migrants, but the remaining passengers, mostly Somalis and Eritreans, died during the accident. According to the investigations, the country of embarkation of the migrant boat was Libya. A Tunisian national, the alleged captain of the boat, was later arrested by the Italian police.

The accident did not deter other migrants staying in Northern Africa to set sail to the EU, as in October, the number of migrants from sub-Saharan Africa detected in the Central Mediterranean remained comparable to the level in September. After a temporary decrease in November 2013, figures in December were again substantially higher than usually during the winter season, although weather and sea conditions in the Central Mediterranean were not encouraging to cross on that route. According to reports, deteriorating living conditions particularly in Libya acted as a pull factor for migration to Italy. The majority of African irregular migrants detected along the Central Mediterranean route were Eritreans.

A relatively new phenomenon is the growing presence of Gambian irregular migrants, detections of whom increased for the sixth consecutive quarter and exceeded 1 300 in Q4 2013, while back in Q4 2011 there had been no Gambians detected in the Central Mediterranean.

Many of the nationalities detected in the Central Mediterranean in Q4 2014 were subsequently also detected on intra-Schengen flights leaving Italy towards northern Europe, most commonly on the route from Malpensa to Copenhagen. The most commonly detected nationalities included migrants from Eritrea, Somalia and Syria, many of whom then submitted asylum claims in Sweden.

In comparison to last winter, Syrians had also significant impact on the situation on the Central Mediterranean route. The number of Syrians escaping the armed conflict in their country and detected on this route grew from just 96 in the last quarter of 2012 to a massive 3 432 a year later, thus closely following Eritreans as the most detected nationality in the Central Mediterranean. Migrant interviews conducted during the JO Hermes suggest that the increasing pressure on Syrian refugees in Egypt may prompt them to consider departure from the country via Libya to Europe.

Overall, Syrians were the most commonly detected nationality, both at the sea and land border of the EU. With over 3 000 detections, the largest share of Syrians illegally crossing the EU external border was reported between Turkey and Bulgaria. This section of the green border has not only seen four consecutive increases since Q4 2012, but also the largest rise in absolute numbers.

Simultaneously, Syrian migrants represented the highest share of persons detected for illegal stay and clandestine entry. Moreover, Syrians showed to be the largest group

among migrants submitting asylum applications in the EU. The armed conflict in Syria has for example resulted in Bulgaria increasingly becoming a destination country. Since Q4 2012 overall applications in Bulgaria have increased fivefold, and over three-quarters of all applications made there in Q4 2013 were submitted by Syrians. Hence, except for a few seasonal short-term variations, all indicators have been showing a clear upward trend since 2011 and made Syrians the most commonly reported nationality regarding irregular migration to the EU.

Overall number of asylum applications was steadily increasing throughout 2013, reaching almost 100 000 in the final quarter of the year, which was the highest number since the FRAN data collection began. Remarkable in this regard is a growing concentration of applications submitted by some of the most represented nationalities: if the asylum seekers from Syria and the Horn of Africa were excluded, the numbers in Q4 2013 would be lower both in comparison to the previous year and to the previous quarter.

Of all nationalities in the Horn of Africa, Eritreans had the largest effect on the total number and the percentage increase of asylum applications. In the fourth quarter of 2013, the number of Eritreans applying for asylum reached a record number of more than 7 000 applicants. Moreover, Member States reported a 14% increase in Somali asylum applicants in comparison to Q4 2012.

Western Balkan nationals seeking international protection in the EU showed a diverse picture in Q4 2013: with 12 446 applicants, the total number of asylum seekers from the Western Balkans (excluding Kosovo*) has been the highest since the introduction of visa-free travel in December 2009 and 2010. In some countries, however, the measures introduced to discourage people from abusing the receiving countries' asylum systems appear to have been effective. Compared to Q4

2012, numbers of asylum seekers from Serbia, Bosnia and Herzegovina, and Montenegro decreased by almost 10%, with Serbian nationals alone submitting over 500 fewer applications. On the other hand, asylum applications submitted by nationals of Albania and the former Yugoslav Republic of Macedonia grew by 76% and 20%, respectively.

Since 2009, a rising share of asylum seekers from the Western Balkans has been choosing Germany as a host country. While in 2010 a third of the visa-free nationals targeted Germany, during the reference period more than three-quarters submitted their asylum application in that country. This is particularly true for asylum seekers from Serbia and the former Yugoslav Republic of Macedonia, of whom 86% and 91%, respectively, sought international protection in Germany in Q4 2013. There was a general increase in the share of applications received by the current top asylum destinations. The proportion of EU overall asylum applications registered by Germany, Sweden and the UK grew from 35% in Q4 2009 to 60% in Q4 2013.

In addition, while most Albanian asylum seekers choose Germany as a destination country, Greece was the country reporting the largest number of Albanians staying illegally. Also detections of illegal border-crossing at the Greek land border with Albania increased by a third compared to the previous quarter, although the situation improved in December 2013. Since they were granted visa-free access to the Schengen area, Albanians have also been increasingly detected using fraudulent documents (counterfeit border-crossing stamps) in two distinct contexts: to fabricate travel histories for multiple and extended stays in Greece, and to enter the UK from the Schengen area. In both cases their detections steadily decreased in 2013, including the final quarter of the year, although Albanians are still among the most commonly detected nationalities using document fraud to travel to and within the EU.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo declaration of independence.

1. Introduction

FRAN Quarterly reports are prepared by the Frontex Risk Analysis Unit and provide a regular overview of irregular migration at the EU external borders, based on the irregular-migration data exchanged among Member State border-control authorities within the cooperative framework of the Frontex Risk Analysis Network (FRAN) and its subsidiary, the European Union Document-Fraud Risk Analysis Network (EDF-RAN).

The main purpose of the FRAN Quarterlies is to provide:

1. feedback to the FRAN community in the context of information exchange;
2. a periodic update to the situational picture of irregular migration at the EU level; and
3. material for constructive discussion on reporting protocols and related trends and patterns.

This report is intended to simultaneously serve two objectives: first, to provide a clear summary of the situation at the external border of the EU, and second, to serve as an archive for future reference and comparative analyses. Consistent with standard archival techniques, some information is repeated among sections to serve as context.

Harmonising complex, multi-source migration data among Frontex and Member States is an ongoing process. Therefore, some of the more detailed data and trends in this report should be interpreted with caution

and, where possible, cross-referenced with information from other sources. The statistics should be understood in the context of the different levels of passenger flows passing through different border sections, the activities undertaken by Member State border-control authorities to secure different border sections, and widespread variation in reporting and data-collection practices.

FRAN members, Member State risk analysis experts and border-control authorities are considered the primary customers of these reports. In addition to the discussions taking place during FRAN meetings, Member State experts are invited and actively encouraged to examine and comment upon the data and analyses presented here. Despite all efforts of the Frontex Risk Analysis Unit and Member State experts involved in data exchange and analyses, it is conceivable that minor errors will occur in these reports due to very challenging timelines, and the growing volume and complexity of data and other information exchanged within the FRAN community.

Due to the simultaneous release of the Annual Risk Analysis 2014 presenting a comprehensive analysis of the situation in the whole of 2013, the current FRAN Quarterly (Q4 2013) is a short issue containing the statistics and only a general overview of the developments in the reviewed period (see Executive summary).

2. Methodology

This, the 22nd issue of the FRAN Quarterly, is a comparative analysis of FRAN data collected between October and December 2013, and exchanged between 30 Member State border-control authorities within the framework of the FRAN. The report presents the results of statistical analysis of quarterly variations in eight irregular-migration indicators and one asylum indicator, aggregated at the level of the event. Bi-monthly analytical reports exchanged by Member States were also used for interpretative purposes and to provide qualitative information, as were other available sources of information, such as Frontex Joint Operations.

Precise definitions of Indicators 1 to 6, aimed at harmonising the data exchanged at EU level, were presented in the annexes of the Q1 and Q2 reports in 2009 and so are not repeated here.

During the June 2010 FRAN Meeting, a proposal for a harmonised definition of the return indicator was outlined and several questions were presented in order to motivate discus-

sion among FRAN members in view of establishing the regular collection of monthly return data by Frontex. Subsequently, an online survey of FRAN members was conducted to gather information and further motivate discussion to fine-tune the proposal for the indicator. The 11th FRAN report (Q1 2011) was the first to include analysis of Indicators 7A and 7B, and the definitions of these indicators are included in an annex to that report. Data collection commenced in January 2011.

The FRAN data-exchange has been in place since September 2007. Data are exchanged through the ICONet Internet platform, an interest group of the European Commission's CIRCA server. Member State monthly data are based on a country template prepared by the Frontex Risk Analysis Unit. The deadline for submitting data for each month is the 25th day of the subsequent month, with the exception of the end of year data, which are requested by 15 January each year. For this 22nd issue of the FRAN Quarterly, the target for Member States to upload the monthly data was thus 15 January 2014. In principle, data submitted subsequent to this date will be reflected in the next FRAN Quarterly, except in cases where clarification is needed in order to proceed with comprehensive analysis.

Following the closure of the CIREFI working group in April 2010, most of its mandates and, of particular relevance, the exchange of data were transferred to the FRAN. Fortunately, most CIREFI indicators already overlapped with the monthly data exchange of FRAN members. The exception was the indicator on returns, which was added as part of the regular data exchange within the FRAN at the beginning of 2011.

Monthly data on the following indicators were exchanged among the FRAN community:

- 1A detections of illegal border-crossing between BCPs
- 1B detections of illegal border-crossing at BCPs
- 2 detections of suspected facilitators
- 3 detections of illegal stay
- 4 refusals of entry
- 5 asylum applications
- 6 document fraud (EDF-RAN)
- 7A return decisions for illegally staying third-country nationals
- 7B effective returns of illegally staying third-country nationals

FRAN and EDF-RAN data used in the tables are as of 10 February 2014

In January 2012, the European Union Document-Fraud Risk Analysis Network (EDF-RAN) was formed as a specialist forum to oversee the exchange and analyses of detections of document fraud to illegally cross the external borders, and on all international flights. Data were backdated and joined with those exchanged under a pilot Tailored Risk Analysis released in 2011.

The EDF-RAN data are checked for inconsistencies, and corrections are made to reported totals to bring them in line with reported breakdowns. Corrections are also made to any three-letter nationality codes not present in the reference ISO list of nationality codes.*

External borders refer to the borders between Member States and third countries. The borders between the Schengen Associated Countries (Norway, Iceland and Switzerland) and third countries are also considered as external borders. The borders between the Schengen Associated Countries and Schengen Member States are considered as internal borders. For the indicators on detections of facilitators, illegal stay and asylum, statistics are also reported for detections at the land borders between the Schengen Member States and Schengen candidates (Bulgaria, Cyprus, Croatia and Romania) or non-Schengen Member States (the UK, Ireland), so that a total for EU Member States and Schengen Associated Countries as a whole can be presented. It was not possible to make this distinction for air and sea borders because Member States do not habitually differentiate between extra-EU and intra-EU air and sea connections but tend to aggregate data for all arrivals.

When data are examined at the level of third-country nationalities, a large percentage usually falls under the category 'Other (not specified)' or 'Unknown'. It is expected that the percentage reported under these categories will decrease with time as Member States improve the quality and speed of their identification, data collection and reporting practices; nationalities are often reported as 'Unknown' if an individual's nationality cannot be established before reports are submitted.

This issue of the FRAN Quarterly also includes main findings of Frontex-coordinated Joint Operations active for at least a proportion of Q4 2013. Namely, for sea borders they were JO Poseidon Sea 2013, Focal Points Sea 2013, JO EPN Hermes 2013, JO EPN Indalo 2013, JO EPN Aeneas 2013 and JO EPN Hera 2013; for land borders – JO Poseidon Land 2013, JO Focal Points Land 2013, Project Coordination Points 2013 and JO Jupiter 2013; for the air border – JO Focal Points Air 2013; and the return-related Project Attica 2013.

Acknowledgements

The Frontex Risk Analysis Unit would like to express its gratitude to all FRAN and EDF-RAN members and their associates in Member State statistical, migration and document-fraud units who collect, aggregate and exchange monthly data, and to the analysts who compile the bi-monthly analytical reports, on which many of the detailed analyses presented here are based.

We are also grateful to Member State representatives who responded to requests for additional information on key topics and emerging trends.

Descriptions of the reasons for refusal of entry:

A has no valid travel document(s);

B has a false/counterfeit/forged travel document;

C has no valid visa or residence permit;

D has a false/counterfeit/forged visa or residence permit;

E has no appropriate documentation justifying the purpose and conditions of stay;

F has already stayed for three months during a six months period on the territory of the Member States of the EU;

G does not have sufficient means of subsistence in relation to the period and form of stay, or the means to return to the country of origin or transit;

H is a person for whom an alert has been issued for the purposes of refusing entry in the SIS or in the national register;

I is considered to be a threat for public policy, internal security, public health or the international relations of one or more Member States of the EU.

Sources and Methods

For the data concerning detections at the external borders, some of the border types are not applicable to all FRAN Member States. This pertains to data on all FRAN indicators since the data are provided disaggregated by border type. The definitions of detections at land borders are therefore not applicable (excluding borders with non-Schengen principalities) for Belgium, the Czech Republic, Denmark, France, Germany, Iceland, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Sweden, Switzerland and the UK. For Cyprus, the land border refers to the Green Line demarcation with the area not under the effective control of the government of the Republic of Cyprus. For sea borders, the definitions are not applicable for land-locked Member States including Austria, the Czech Republic, Hungary, Luxembourg, Slovakia and Switzerland.

In addition, data on detections of illegal border-crossing at land, air and sea BCPs (1B) are not available for Iceland, Ireland and Spain and in Greece (these detections are included in the data for Indicator 1A). Data for Norway only includes detections of illegal border-crossing at land and sea BCPs (1B), not between BCPs (1A).

In Italy, detections of illegal border-crossing at sea BCPs are only reported for intra-EU border-crossing from Greece. Data on detections of illegal border-crossing between sea BCPs (1A) are not available for Ireland.

Data on apprehension (FRAN Indicator 2) of facilitators is not available for Ireland. For Italy, the data are not disaggregated by border type, but are reported as total apprehensions (not specified). Data for Italy and Norway also include the facilitation of illegal stay and work. For Romania, the data include land intra-EU detections on exit at the border with Hungary.

For the data concerning detections of illegal stay (FRAN Indicator 3), data on detections at exit are not available for Denmark, Ireland, Italy, Spain and the UK.

Data on refusals of entry (FRAN Indicator 4) at the external EU borders are not disaggregated by reason of refusal for Ireland and the UK. Refusals of entry at the Spanish land borders at Ceuta and Melilla (without the issuance of a refusal form) are reported separately and are not included in the presented FRAN data.

The data on applications for international protection (FRAN Indicator 5) are not disaggregated by place of application (type of border on entry or inland applications) for Austria, the Czech Republic and Slovenia. For these countries, only the total number of applications is reported. For France, only asylum applications at the external borders are reported, not inland applications. For the UK, data reported for applications at air BCPs also include applications at sea BCPs.

The data on return decisions issued (FRAN Indicator 7A) are not available for Ireland, France, The Netherlands and Sweden. The data on effective returns (FRAN Indicator 7B) are not available for Ireland. In addition, the data of effective returns are not disaggregated by return operation (voluntary and forced) for Spain. The data on voluntary effective returns (FRAN Indicator 7A) are not disaggregated by type of return operation (IOM-assisted and others) for Belgium, Czech Republic, Finland and the Netherlands. The data on forced effective returns (FRAN Indicator 7A) are not disaggregated by type of return operation (enforced by Member States and by Joint Operations) for Belgium, Finland, Iceland and the Netherlands.
